**General Statistics**

This page provides a basic overview of the report. The Visits Over Time graph identifies the overall count of visits to your Web site. The General Statistics table provides statistics of the total activity for this Web site during the designated report period.

![Visits Over Time Graph]

</table>

**General Statistics - Help Card**

**Average Hits Per Day** - Number of successful hits divided by the total number of days in the log file.
<table>
<thead>
<tr>
<th><strong>General Statistics - Help Card</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Average Page Views Per Day</strong> - Number of page views divided by the total number of days in the log file.</td>
</tr>
<tr>
<td><strong>Average Visit Length</strong> - Average of all non-zero length visits in the reporting period. A zero-length visit occurs when all hits in that visit are logged with the exact same time stamp.</td>
</tr>
<tr>
<td><strong>Average Visits Per Day</strong> - Number of visits divided by the total number of days in the log file.</td>
</tr>
<tr>
<td><strong>Document Views</strong> - Number of hits to pages that are considered documents—not dynamic pages or forms—as defined by the system administrator.</td>
</tr>
<tr>
<td><strong>Dynamic Pages and Forms Views</strong> - Number of hits to pages that are considered dynamic pages or forms. Reporting Center considers any URL containing options (with a question mark in the URL) a dynamic page. Any file with a POST command is considered a form.</td>
</tr>
<tr>
<td><strong>Hits</strong> - Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.</td>
</tr>
<tr>
<td><strong>Home Page Hits</strong> - Number of times the home page (as defined in the profile) was viewed.</td>
</tr>
<tr>
<td><strong>International Visits</strong> - Percentage of visitors who are defined as &quot;international visitors&quot; by the system administrator.</td>
</tr>
<tr>
<td><strong>Page</strong> - Any document, dynamic page, or form. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form.</td>
</tr>
<tr>
<td><strong>Page View (Impressions)</strong> - A hit to any file classified as a page. Contrast the value for &quot;Page Views&quot; with the value for &quot;Successful Hits For Entire Site,&quot; which includes hits to files of every type.</td>
</tr>
<tr>
<td><strong>Successful Hits For Entire Site</strong> - Number of successful hits including HTML pages, images, forms, scripts, and downloaded files.</td>
</tr>
<tr>
<td><strong>Unique Visitors</strong> - The total number of unique visitors during the report period. A unique visitor is identified by their IP address, domain name, or cookie.</td>
</tr>
<tr>
<td><strong>Visits</strong> - Number of visits to your site. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.</td>
</tr>
<tr>
<td><strong>Visits From Your Country</strong> - Percentage of visits from your country. The name of your country and the country code are shown. Your system administrator configures the selection for your country.</td>
</tr>
<tr>
<td><strong>Visits of Unknown Origin</strong> - Percentage of visits where the visitor's domain name could not be determined or the country associated with the domain name could not be determined.</td>
</tr>
<tr>
<td><strong>Visitors Who Visited More Than Once</strong> - Number of visitors who visited the site more than once during the reporting period.</td>
</tr>
<tr>
<td><strong>Visitors Who Visited Once</strong> - Number of visitors who visited the site exactly once during the reporting period.</td>
</tr>
</tbody>
</table>

The General Statistics page provides an overview of your Web site's performance and visitor behavior, and can help you determine which chapters will be most valuable to you.
Page Views Over Time

This page helps you determine the bandwidth requirements of your Web site by tracking page views over the course of the report period.

Page Views Over Time - Help Card

**Page** - Any document, dynamic page, or form. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form.

**Page View** - A hit to any file classified as a page. Contrast page views with hits, which counts files of every type.

**Time Interval** - A one-year report displays monthly time increments. A one-quarter report displays weekly time increments. A one-month report or a one-week report displays daily time increments. A daily report displays hourly time increments. All activity attributed to one time increment occurs between the listed
<table>
<thead>
<tr>
<th><strong>Page Views Over Time - Help Card</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>increment and the beginning of the next one. An hour-long interval marked 12:00, for example, includes all activity between 12:00 and 12:59.</td>
</tr>
</tbody>
</table>

- **%** - Percentage of total page views that occurred during the specified time interval.

Periods of less activity can be considered good times for maintenance and content improvement.
**Top Visitors**

This page identifies the IP address, domain name, or cookie of each visitor, and identifies the visitor's relative activity level on the site. If you use cookies to track visits, Reporting Center can differentiate between hits from different visitors with the same IP address.

<td></td>
</tr>
<tr>
<td>%</td>
<td>Percentage of visits to your site by the specified visitor.</td>
<td></td>
</tr>
</tbody>
</table>

Consider the visitors who use the site most, and tailor your site to their interests and needs. If your site is an intranet, notice which employees use the site most, and find out what they like about it. You might also get feedback from those who use it the least and find out what they are looking for.

**Note:** If a visitor has a dynamic IP address, or if a group of visitors are behind a proxy server or firewall, this data might be misleading. In the case of a dynamic IP address, multiple IP addresses could be shown for a single visitor, and in the case of a firewall or proxy server, one IP address could be used by more than one visitor.
# Top Browsers by Visits

This page identifies the most popular browsers used by visitors to your site. This information will only be displayed if your server is logging the browser/platform information.

<table>

### Top Browsers by Visits - Help Card

**Browser** - A program used to locate and view Web pages. These include Netscape, Mosaic, Microsoft Internet Explorer, and others.

**Total** - The total visits where there was sufficient information to identify the browser. This number may be less than the total visits overall.

**Visits** - Number of times a visitor with the specified browser came to your site. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

**%** - Percentage of total visits by visitors using the specified browser.

Browser data can help you determine how to configure your site for optimal viewing.

**Note:** Any hits identified as originating from a spider (an automated program that searches the Internet) are not counted in this table. Also, if a browser does not identify itself in its request to the Web server, it will get counted on this page as an "Other."
Top Pages by Visits

This identifies the most popular Web pages on your site and shows you the number of visits for each, and displays the average length of time the page was viewed.

### Top Pages by Visits - Help Card

**Avg Time Viewed** - Average length of time the specified page was viewed.

**Pages** - A document, dynamic page, or form. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form. If the page has a title, you will see the title of the page and the URL. Otherwise, you will see the URL and the words "Page Has No Title."

**Visits** - Number of visits to this page. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

**%** - Percentage of the total visits in which the visitor viewed this page at least once.

Pages with good content and design are more likely to attract visitors and be revisited. Less popular pages on a site can be made more appealing by improving the content or incorporating design elements similar to that on the more important pages. Always remember that people are far more interested in content than in design, and average view times can help determine which content is most important to your visitors.
**Dynamic Pages & Forms by Visits**

This page identifies the most popular dynamic pages and forms executed by the server.

Dynamic Pages and Forms - Dynamic pages are generated dynamically based on values selected by a visitor. They are generated with variables, and do not exist anywhere in a static, predictable form. Reporting Center considers any URL containing options (with a question mark in the URL) a dynamic page. Any file with a POST command is considered a form.

Pages - This column lists dynamic pages and forms, but not documents. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator.

Visits - Number of visits where the specified dynamic page or form was accessed. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

% - Of the total number of visits in which at least one dynamic page or form was accessed, this percentage of visits included this page.

This page can be used to track the activity of dynamic pages and forms separately from static pages (documents).
Dynamic Pages & Forms by Visits Over Time

This page identifies the most popular dynamic pages and forms executed by the server.

Page Views Over Time - Help Card

**Page** - Any document, dynamic page, or form. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form.

**Page View** - A hit to any file classified as a page. Contrast page views with hits, which counts files of every type.

**Time Interval** - A one-year report displays monthly time increments. A one-quarter report displays weekly time increments. A one-month report or a one-week report displays daily time increments. A daily report displays hourly time increments. All activity attributed to one time increment occurs between the listed...
<table>
<thead>
<tr>
<th>Page Views Over Time - Help Card</th>
</tr>
</thead>
<tbody>
<tr>
<td>increment and the beginning of the next one. An hour-long interval marked 12:00, for example, includes all activity between 12:00 and 12:59.</td>
</tr>
<tr>
<td>% - Percentage of total page views that occurred during the specified time interval.</td>
</tr>
</tbody>
</table>

Periods of less activity can be considered good times for maintenance and content improvement.
**Most Downloaded Files**

Top Visitors - Help Card

Visitor - The IP address, domain name, or cookie of the visitor.

Visits - Number of times the specified visitor visited your site. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

% - Percentage of visits to your site by the specified visitor.

Consider the visitors who use the site most, and tailor your site to their interests and needs. If your site is an intranet, notice which employees use the site most, and find out what they like about it. You might also get feedback from those who use it the least and find out what they are looking for.

Note: If a visitor has a dynamic IP address, or if a group of visitors are behind a proxy server or firewall, this data might be misleading. In the case of a dynamic IP address, multiple IP addresses could be shown for a single visitor, and in the case of a firewall or proxy server, one IP address could be used by more than one visitor.
**Top Visitors Over Time**

This page identifies the IP address, domain name, or cookie of each of your most frequent visitors. It also shows the visitor's relative activity level on the site.

Top Geographic Regions - Help Card

- **Geographic Regions** - The geographic part of the world where visitors to your web site are located. “Region Unspecified” represents visitors whose geographic region could not be determined. Two methods exist for identifying the location of each visitor:

  - **WebTrends GeoTrends Database** - If GeoTrends is turned on for this profile, the region is determined by looking up the visitor's IP address in this database.
  - **Domain Name** - The region can be determined by the domain name. The domain name can be identified if it was logged by the web server or, if it is defined in the Internet Domain Name System then it may be found using DNS resolution.

- **Total** - The total visits.

- **Visits** - Number of visits from this geographic region. A visit is a series of actions that begins when a

**Top Countries - Help Card**

? (Valid chart)

**Countries** - Two methods exist for identifying the location of each visitor:
<table>
<thead>
<tr>
<th><strong>Top Countries - Help Card</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>WebTrends GeoTrends Database</strong> - If GeoTrends is turned on for this profile, the country is determined by looking up the visitor's IP address in this database.</td>
</tr>
<tr>
<td><strong>Domain Name</strong> - The region can be determined by the domain name. The domain name can be identified if it was logged by the web server or, if it is defined in the Internet Domain Name System then it may be found using DNS resolution.</td>
</tr>
<tr>
<td><strong>Total</strong> - The total visits where there was sufficient information to identify the country. This number may be less than the total visits overall.</td>
</tr>
<tr>
<td><strong>Visits</strong> - Number of visits from the specified country. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.</td>
</tr>
<tr>
<td><strong>%</strong> - Percentage of total visits from the specified country.</td>
</tr>
</tbody>
</table>

This information can help you meet the needs of your target audience as well as discover new audiences. Consider how you can make the content comprehensive and relevant to an international audience.

**Note:** Use this information carefully because it is based on Internet registration, and may not always be an accurate identifier of the visitor's actual location.
Top Domain Names by Visits

The threshold set for this section in the wtm_wtx.ini file was reached. Results shown in tables and graphs do not reflect the entire contents of the log file(s).

This page lists the domain name of the most active visitors to your web site.

Top Domain Names by Visits - Help Card
Top Domain Names by Visits - Help Card

?  

**Domain Name** - The text name corresponding to the IP address of a computer on the Internet. For example, netiq.com is a domain name. The domain name can be determined if it was logged by the web server or, if it is defined in the Internet Domain Name System then it may be found using DNS resolution. Otherwise, the domain name is not known and this table shows the IP address.

The domain name shown is the second-level domain name, such as netiq.com. If the top-level domain name is a country code, then this shows the third-level domain name, such as anycompany.com.au. For example, all visitors from sales.netiq.com, us.sales.netiq.com, and service.net.iq.com are combined in the statistics for netiq.com.

Click on the domain name to generate an Internet whois lookup.

**Total** - The total for all visits.

**Visits** - Number of visits to your site from this domain name. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

% - Percentage of the total visits that were from this domain name or IP address.

Use this information when you are interested in high-level domain names of visitors to your web site.
Top-Level Domain Types by Visits

This page provides a breakdown of top-level domain types.

<table>
<thead>
<tr>
<th>Top-Level Domain Types</th>

</tr>
</tbody>
</table>

Top-Level Domain Types by Visits - Help Card

**Top-Level Domain** - The suffix of a domain name. A top-level domain can be based on the type of organization (.com, .edu, .museum, .name, etc) or it can be a country code (.uk, .de, .jp, .us, etc.). The top-level domain can be used to identify the type of web site. The following is a partial list of how this report categorizes top-level domains:

ARPANET: .arpa

Commercial: .com .co .com.[country code] .co.[country code] .firm.co .firm.ve .ltd.uk

International: .int .int.co .int.ve .inttl.tn

### Top-Level Domain Types by Visits - Help Card

<table>
<thead>
<tr>
<th>Military: .mil .mil.[country code]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network: .net .ad.jp .ne.kr .net.[country code]</td>
</tr>
<tr>
<td>Organization: .org .or .org.[country code] .or.[country code]</td>
</tr>
</tbody>
</table>

**Total** - The total visits where there was sufficient information to identify the top-level domain. This number may be less than the total visits overall.

**Visits** - Number of visits to your site from the specified top-level domain. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

**%** - Percentage of total visits from sites in the specified top-level domain. The percentages refer to the total number of visits for which the domain name can be determined. Some IP addresses can not be resolved to a domain name.

Consider which types of organizations are interested in your site, and consider how you can interest other types of organizations.

**Note:** This information can be displayed only if reverse DNS lookups have been performed. Even when DNS lookups are performed, some IP addresses can not be resolved to a domain name.
Summary of Activity for Report Period

This page summarizes general server activity.

<table>
<thead>
<tr>
<th>Summary of Activity for Report Period</th>
</tr>

</tr>
<tr>
<td>Failed Hits as Percent</td>
<td>2.26%</td>
</tr>
<tr>
<td>Cached Hits</td>
<td>1,065,823</td>
</tr>
<tr>
<td>Cached Hits as Percent</td>
<td>13.38%</td>
</tr>
</tbody>
</table>

**Technical Statistics and Analysis - Help Card**

**Cached Hits** - Hits where the page was found in the cache of the browser, so the server did not need to transfer the file.

**Cached Hits as Percent** - Percentage of hits that were cached compared with the total number of hits.

**Failed Hits** - Number of hits where a server or client error occurred.

**Failed Hits as Percent** - Percentage of hits where a server or client error occurred.

**Hits** - Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

**Successful Hits** - Number of hits without a server or client error.

**Total Hits** - Number of successful hits plus failed hits.

Use this information for a bird's-eye view of the reliability of your Web site. Many major problems can be revealed here.
Dynamic Pages & Forms Errors

This page shows the number of successful form submissions and dynamic pages served compared to the number that failed.

<table>
<thead>
<tr>
<th></th>

<td>3.41%</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td>181,204</td>
<td>100.00%</td>
</tr>
</tbody>
</table>

Dynamic Pages & Forms Errors - Help Card

**Hits** - Number of hits to the specified page. Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

**Pages** - This column lists dynamic pages and forms, but not documents. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form.

% - Percentage of hits to the specified page that were successful.

This page helps determine the reliability of your site.
Client Errors

This page identifies the error codes from the browsers accessing your server.

<table>
<thead>
<tr>
<th>HTTP Status Codes</th>
<th>Hits</th>
<th>%</th>
</tr>
</thead>
<tbody>

### Top Search Engines - Help Card

#### Top Search Engines Table

- **Engines**: Specific search engine being analyzed.
- **Referrers**: Number of visitors referred to your site from the specified search engine.
- **%**: Percentage of visitors referred from search engines who were referred by the search engine specified.

#### Top Search Engines with Search Phrases Detail Table

- **Engines**: Specific search engine being analyzed in conjunction with the phrase in the adjacent column.
- **Phrases**: The search phrases being analyzed in conjunction with the search engine in the adjacent column. A search phrase is the entire search string entered by a visitor, which can include one or more individual keywords.
- **Referrals**: Number of visitors referred to your site from the specified search engine who used the specified phrase in their search.
- **%**: Percentage of visitors referred from search engines who used the specified search engine and phrase.

#### Top Search Engines with Keywords Detail Table

- **Engines**: Specific search engine being analyzed in conjunction with the phrase in the adjacent column.
- **Keywords**: The search phrases being analyzed in conjunction with the search engine in the adjacent column. A search phrase is the entire search string entered by a visitor, which can include one or more individual keywords.
- **Referrals**: Number of visitors referred to your site from the specified search engine who used the specified phrase in their search.
- **%**: Percentage of visitors referred from search engines who used the specified search engine and phrase.

Top Search Phrases - Help Card

?  

Top Search Phrases Table

Phrases - The specific search phrases being analyzed. A search phrase is the entire search string entered by a visitor. It can include one or more keywords.

Referrals - Number of visitors referred to your site who used the specified search phrase, regardless of the search engine they used.

% - Percentage of referred visitors who used the specified search phrase.

Top Search Phrases with Engines Detail Table

Engines - Specific search engine being analyzed in conjunction with the phrase in the adjacent column.

Phrase - The search phrase being analyzed in conjunction with the search engine in the adjacent column. A search phrase is the entire search string entered by a visitor. It can include one or more keywords.

Referrals - Number of visitors referred to your site from the specified search engine who used the specified phrase in their search.

% - Percentage of visitors referred from search engines who used the specified search engine and phrase.

How are people getting to your site? Use these tables to find out if your visitors are using the search phrases you expect. Do you need to use different keywords in page titles to make it easier for people to find your site with search engines?
Top Search Keywords

The first table identifies keywords which led the most visitors to the site (regardless of the search engine). The second table identifies, for each keyword, which search engines led visitors to the site.

At the most basic level, this section tells you which search engines are being used most frequently to find your site. You also may find that some search engines are referring visitors to your site with the keywords you expect and that other search engines are not.
**Top Browsers by Visits**

This page identifies the most popular browsers used by visitors to your site. This information will only be displayed if your server is logging the browser/platform information.

#### Top Browsers by Visits - Help Card

**Browser** - A program used to locate and view Web pages. These include Netscape, Mosaic, Microsoft Internet Explorer, and others.

**Total** - The total visits where there was sufficient information to identify the browser. This number may be less than the total visits overall.

**Visits** - Number of times a visitor with the specified browser came to your site. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.

**%** - Percentage of total visits by visitors using the specified browser.

Note: Any hits identified as originating from a spider (an automated program that searches the Internet) are not counted in this table. Also, if a browser does not identify itself in its request to the Web server, it will get counted on this page as an "Other."
This page identifies the operating systems most used by the visitors to the site. This information will only be displayed if your server is logging the browser/platform information.

**Top Platforms by Visits - Help Card**

**Platform** - The specified platform being analyzed. The operating system used by the visitor to your site.

**Total** - The total visits that were not identified as from a spider. This number may be less than the total visits overall.

**Visits** - Number of visits by visitors using the specified platform. A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by...
| % | Percentage of visitors using the specified platform. |

This information is useful when determining what content to include on your Web site.
Glossary

The following terms are used in Reporting Center reports, and some are used throughout the World Wide Web in general.

<table>
<thead>
<tr>
<th>Glossary</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ad</td>
<td>A graphic or banner which takes a visitor to another Web site when clicked.</td>
</tr>
<tr>
<td>Ad Click</td>
<td>A click on an advertisement which takes a visitor to another Web site.</td>
</tr>
<tr>
<td>Ad View</td>
<td>Occurs when an ad is displayed to a visitor. Once visitors have viewed an ad, they can click on it (see Ad Click). There may be more than one ad on an ad view.</td>
</tr>
<tr>
<td>Authenticated Username</td>
<td>A unique visitor tracked by user name and password rather than by IP address. You may find more authenticated user names than total visitors because several persons may be using the same IP address. Since many ISPs dynamically assign IP addresses, and since multiple visitors may use a single IP address, authentication is a much more accurate way to identify visitors.</td>
</tr>
<tr>
<td>Authentication</td>
<td>Technique that limits access to Internet or intranet resources to visitors who identify themselves by entering a user name and password.</td>
</tr>
<tr>
<td>Bandwidth</td>
<td>Measure of the traffic on a site. Bandwidth is expressed as the amount of data transferred in a specified unit of time.</td>
</tr>
<tr>
<td>Browser</td>
<td>A program used to locate and view Web pages. These include Netscape, Mosaic, Microsoft Internet Explorer, and others.</td>
</tr>
<tr>
<td>Click Through Rate</td>
<td>Percentage of visitors who viewed an ad and also clicked on it. This is a good indication of an ad's effectiveness.</td>
</tr>
<tr>
<td>Client</td>
<td>A computer that accesses resources provided by another computer, called a server.</td>
</tr>
<tr>
<td>Client Errors</td>
<td>An error occurring due to an invalid request by the visitor's browser. Client errors are in the 400-range. See the &quot;Status Code&quot; glossary entry for more information.</td>
</tr>
<tr>
<td>Company Database</td>
<td>The database installed and used by Reporting Center to look up the company name, city, state, and country corresponding to a specific domain name.</td>
</tr>
<tr>
<td>Cookies</td>
<td>Files containing information about Web site visitors. This information can include the visitor's user name, preferences, etc. The information is provided by visitors during their first visit to a Web site. The server records this information in a text file and stores it on the visitor's hard drive. At the beginning of later visits, the server looks for a cookie and configures itself based on the information provided.</td>
</tr>
<tr>
<td>Destination Page</td>
<td>A page chosen by the system administrator for Path Analysis. The Path Analysis pages track which clicks brought each visitor to the selected Destination Page.</td>
</tr>
<tr>
<td>Documents</td>
<td>Pages defined as &quot;documents&quot; by the system administrator. Typically, a page will be defined as a document if the content is static, such as a complete HTML page. However, the administrator has the option of defining dynamic pages and forms as documents if he or she chooses.</td>
</tr>
<tr>
<td>Domain Name</td>
<td>The text name corresponding to the IP address of a computer on the Internet. For example, <a href="http://www.webtrends.com">www.webtrends.com</a> is a domain name.</td>
</tr>
<tr>
<td>Domain Name Lookup</td>
<td>The process of converting an IP address into a text name (for example, 204.245.240.194 is converted to <a href="http://www.webtrends.com">www.webtrends.com</a>).</td>
</tr>
<tr>
<td>Dynamic Pages and Forms</td>
<td>Dynamic pages are generated dynamically based on values selected by a visitor. They are generated with variables, and do not exist anywhere in a static, predictable form. Reporting Center considers any URL containing options (with a question mark in the URL) a dynamic page. Any file with a POST command is considered a form.</td>
</tr>
<tr>
<td>Entry File</td>
<td>The first file requested by a visitor during a visit to your Web site.</td>
</tr>
<tr>
<td>Entry Page</td>
<td>The first page viewed during a visit to your Web site. If a visit consists only of hits to non-page files, that visit has no entry page. This can cause the total number of entry pages to be less than the total number of visits.</td>
</tr>
<tr>
<td>Glossary</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td></td>
</tr>
<tr>
<td><strong>Exit Page</strong></td>
<td>The last page viewed during a visit to your Web site. If a visit consists only of hits to non-page files, that visit has no exit page. This can cause the total number of exit pages to be less than the total number of visits.</td>
</tr>
<tr>
<td><strong>FTP</strong></td>
<td>File Transfer Protocol. It is a standard method of sending files from one computer to another over the Internet.</td>
</tr>
<tr>
<td><strong>File Type</strong></td>
<td>Identifies types of files by their file extension. For example, a file named graphic.gif is identified as type &quot;gif.&quot;</td>
</tr>
<tr>
<td><strong>Filters</strong></td>
<td>A means of narrowing the scope of a report by specifying ranges or types of data to include or exclude.</td>
</tr>
<tr>
<td><strong>Forms</strong></td>
<td>Scripted pages which pass variables back to the server. These pages are used to gather information from visitors. Reporting Center counts any file with an HTTP POST command as a form.</td>
</tr>
<tr>
<td><strong>GIF</strong></td>
<td>Graphics Interchange Format. It is a graphics file format commonly used in HTML documents.</td>
</tr>
<tr>
<td><strong>HTML</strong></td>
<td>Hypertext Markup Language. It is the programming language for static Web pages. It usually includes hypertext links between related objects and documents.</td>
</tr>
<tr>
<td><strong>HTTP</strong></td>
<td>Hypertext Transfer Protocol. It is a standard method of transferring data between a Web server and a Web browser.</td>
</tr>
<tr>
<td><strong>Hit</strong></td>
<td>Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.</td>
</tr>
<tr>
<td><strong>Home Page</strong></td>
<td>The main or introductory page of a Web site. The home page provides visitors with an overview and links to the rest of the site. It often contains or links to a Table of Contents.</td>
</tr>
<tr>
<td><strong>Home Page URL</strong></td>
<td>The URL for the home page of the site analyzed in the report.</td>
</tr>
<tr>
<td><strong>IP Address</strong></td>
<td>Internet Protocol Address. It is a series of four one- to three-digit numbers separated by periods. It is used to identify a computer connected to the Internet. For example, 212.6.125.76 is an IP address.</td>
</tr>
<tr>
<td><strong>JPEG</strong></td>
<td>Joint Photographic Expert Group. It is a compressed graphics format common on the Internet.</td>
</tr>
<tr>
<td><strong>Log File</strong></td>
<td>A file created by a Web or proxy server which contains information about the activity of the server.</td>
</tr>
<tr>
<td><strong>New Users</strong></td>
<td>Visitors who didn't have a cookie on their first visit, but had one during later visits.</td>
</tr>
<tr>
<td><strong>No Referrer</strong></td>
<td>Indicates visits to your Web site that did not originate from any other site. For example, any visitor who types the URL of your site directly into their browser window fits into this category.</td>
</tr>
<tr>
<td><strong>Other</strong></td>
<td>In tables showing a variable-length list of items, the number of items may exceed the number that can be viewed at one time. The values for the items not currently shown are added together and shown in the row named &quot;Other.&quot;</td>
</tr>
<tr>
<td><strong>Page</strong></td>
<td>Any document, dynamic page, or form. Different types of profiles have different default settings for which file extensions qualify a file as a document. These settings can be changed by the Reporting Center system administrator. Any URL containing a question mark is considered a dynamic page. Any file with a POST command is considered a form.</td>
</tr>
<tr>
<td><strong>Page View</strong></td>
<td>A hit to any file classified as a page. Contrast the value for &quot;page views&quot; with the value for &quot;hits,&quot; which includes hits to files of every type.</td>
</tr>
<tr>
<td><strong>Palm Browser</strong></td>
<td>A program used on a Palm device to display site content, similar to Netscape or Internet Explorer on PCs.</td>
</tr>
<tr>
<td><strong>Palm Device</strong></td>
<td>A portable personal computer small enough to fit in the palm of a person's hand. Reporting Center reports only include Palm devices if the log files shows the device used a Palm browser.</td>
</tr>
<tr>
<td><strong>Path Through Site</strong></td>
<td>The sequence of pages a visitor views, from the entry page to the exit page and all pages in between.</td>
</tr>
<tr>
<td><strong>Paths from Start</strong></td>
<td>The sequence of pages a visitor views, excluding the entry page.</td>
</tr>
<tr>
<td><strong>Paths to Destination</strong></td>
<td>The sequence of pages a visitor views before arriving at a selected Destination Page.</td>
</tr>
</tbody>
</table>
### Glossary

<table>
<thead>
<tr>
<th><strong>Platform</strong></th>
<th>Refers to the operating system, such as Linux or Windows 98.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Protocol</strong></td>
<td>An established method of exchanging data over the Internet.</td>
</tr>
<tr>
<td><strong>Referrer</strong></td>
<td>URL of a Web page that refers visitors to your site.</td>
</tr>
<tr>
<td><strong>Report Period</strong></td>
<td>The dates covered in the report. You may select a report period of any day, week, month, quarter, or year within the data provided by the log analysis.</td>
</tr>
<tr>
<td><strong>Returning Visitors</strong></td>
<td>Visitors who already had a cookie from your site before they visited.</td>
</tr>
<tr>
<td><strong>Script</strong></td>
<td>A simple programming language used to execute specific or limited tasks. Scripts are often used for pages on the Internet to serve dynamic content and to tailor pages for individual visitors.</td>
</tr>
<tr>
<td><strong>Server</strong></td>
<td>A computer that hosts information available to anyone accessing the Internet or an internal intranet.</td>
</tr>
<tr>
<td><strong>Server Error</strong></td>
<td>An error occurring on the server. Web server errors have codes in the 500 range.</td>
</tr>
<tr>
<td><strong>Single Access Page</strong></td>
<td>A page on your Web site that visitors open, then exit from, without viewing any other page. To qualify, the visit must be to a page with a valid document type. If the visit is to a document with a different type (such as a graphic or sound file), the file does not count as a single access page, and the visit is not included in the total. Such visits are often the result of other sites referencing a specific downloadable file or graphic on your site. In these cases, a visit may have a single hit to a non-document type file, and will not be counted in the percentage calculations.</td>
</tr>
<tr>
<td><strong>Spider</strong></td>
<td>An automated program which searches the internet.</td>
</tr>
</tbody>
</table>

### Status Code

The HTTP status code of a file request specifies whether the transfer was successful or not, and why. These codes are defined in RFC 2616, section 6.1.1.

#### "Success" codes:

- **100 = Success**: Continue
- **101 = Success**: Switching Protocols
- **200 = Success**: OK
- **201 = Success**: Created
- **202 = Success**: Accepted
- **203 = Success**: Non-Authoritative Information
- **204 = Success**: No Content
- **205 = Success**: Reset Content
- **206 = Success**: Partial Content
- **300 = Success**: Multiple Choices
- **301 = Success**: Moved Permanently
- **302 = Success**: Found
- **303 = Success**: See Other
- **304 = Success**: Not Modified
- **305 = Success**: Use Proxy
- **307 = Success**: Temporary Redirect

#### "Failed" codes:

- **400 = Failed**: Bad Request
- **401 = Failed**: Unauthorized
- **402 = Failed**: Payment Required
- **403 = Failed**: Forbidden
- **404 = Failed**: Not Found
- **405 = Failed**: Method Not Allowed
- **406 = Failed**: Not Acceptable
- **407 = Failed**: Proxy Authentication Required
- **408 = Failed**: Request Time-out
- **409 = Failed**: Conflict
- **410 = Failed**: Gone
- **411 = Failed**: Length Required
- **412 = Failed**: Precondition Failed
<table>

## Glossary

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Visit</strong></td>
<td>A visit is a series of actions that begins when a visitor views their first page from the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time limit is thirty minutes. This time limit can be changed by the system administrator.</td>
</tr>
<tr>
<td><strong>Visit Duration (Minutes)</strong></td>
<td>The number of minutes your Web site was viewed by a visitor.</td>
</tr>
<tr>
<td><strong>Visitor Minutes</strong></td>
<td>Total number of minutes your site was viewed by all visitors during the report period.</td>
</tr>
<tr>
<td><strong>Visits With Clicks</strong></td>
<td>Visits to your site where at least one ad was clicked on.</td>
</tr>
<tr>
<td><strong>WAP Browser</strong></td>
<td>A program used on a WAP device to display site content, similar to Netscape or Internet Explorer on PCs.</td>
</tr>
<tr>
<td><strong>WAP Carrier</strong></td>
<td>A server that acts as an intermediary and relays requests from visitors with WAP devices to your site.</td>
</tr>
<tr>
<td><strong>WAP Device</strong></td>
<td>A wireless device using Wireless Application Protocol (WAP), such as a cellular telephone or radio transceiver, that can be used to access the Internet. Reporting Center reports only include WAP devices if the log file shows the device used a WAP browser.</td>
</tr>
<tr>
<td><strong>WTLS</strong></td>
<td>Acronym for Wireless Transport Layer Security protocol, which is the security layer endorsed by the WAP Forum (<a href="http://www.wapforum.org">www.wapforum.org</a>). Its primary goal is to provide privacy, data integrity, and authentication for WAP applications.</td>
</tr>
